

### **Researcher interactions:**

#### **When interacting with own documents:**

- Be able to upload them and set their title and visibility and choose which organization they want to share it with
- Be able to delete the documents only they have uploaded with a confirmation pop up before doing so
- Maybe be able to edit the documents that they have uploaded – change the title, visibility or change the whole file itself.

#### **When interacting with files shared from their organization:**

- They could be able to share those files
- Should not be able to remove other files than the ones they own
- Should be able to view or download the files

#### **When interacting with files from researches from other organizations:**

- Should not be able to edit or delete them in any way
- Should only be able to view them and maybe download/share?

### **Organization Admin interactions:**

#### **If organization shared document needs to be approved:**

- Admin user can have a separate “awaiting approval” page where they would have a list of all documents that need approval. They could be able to click on each document title from the list and check what the document consists of and have Approve/Deny button. If approved, gets uploaded into the website. If denied, the document’s owner gets notified of that.

#### **Interactions with another organization’s shared documents:**

- They could be able to view all documents shared with their organization, download, edit or delete them on their organization’s end?

### **System Admin interactions:**

- They should be able to view all documents by all organizations
- Should be able to edit/delete/download pretty much anything since this is the highest privileged rank
